EasyBackup is a highly intuitive piece of software that enables you to back up important data to a safe location, in case of unexpected data loss, corruption or accidental deletion. It is

---

aided by a powerful configuration set that lets you personalize each aspect of a backup job in detail. Adopting a modern and minimalistic interface, the tool gives you the possibility to create a new job by following several simple steps in a wizard, or to open an existing one to use the settings already applied there. Seamlessly configure backup options Firstly, it is necessary to define the scope, namely the types of files to

---

take into account for the operation. You can select one or more partitions, music, videos or pictures, Microsoft Office files (Word, Excel, PowerPoint, Outlook, Live Mail) along with Mozilla Thunderbird messages. It is also possible to include any custom files or folders, or files by format. Secondly, you can define backup settings regarding the name, password protection, automated mode and

---

frequency, together with the storage location (local, removable or network location). Manage backup jobs, run full and incremental backups, restore files

Multiple tasks can be added to the manager, and you can execute any of them with one click. The software utility supports incremental backup mode, which means that after it creates a full backup, it will update it only by adding new files and not by replacing

---

the existing ones (in order to reduce job duration). When it comes to restoring a backup, you can either copy all files and folders, or just extract the ones you want. What's more, you can select between multiple versions after consulting their timestamps, view properties (storage location, size, frequency, protection, last time and date), as well as remove any of them from the list. Evaluation and

---

conclusion No error dialogs were shown in our tests, and the application didn't hang or crash. It executes backup jobs swiftly while remaining light on system resources. Taking into account its advanced settings intuitively organized in an easy-to-navigate wizard, EasyBackup should be able to suit everyone's tastes when it comes to quickly backing up files without having to configure overly complicated

options. Download EasyBackup (formerly Abelssoft Backup) Product Key Freefile-Shareware.com is the leading provider of Free File Hosting. With our file transfer service you can send your files and folders to the cloud to share them with others. Not an online backup, the advantage

KEYMACRO is an application which helps you to keyfiles. Keyfiles are used to protect files and folders from overwriting and files from changing. You can also use it for temporary files. You can create a new keyfile, open an existing keyfile, and then edit its properties. The keyfile is divided into eight sections, and you can create a new section or delete an existing one. You can also add files to the keyfile,

---

and copy, paste and delete them.

Keyfiles can be viewed, copied and archived. Conclusions: KeyMacro gives you a clear and easy to use interface.

It's a useful tool for protecting data, but

it doesn't seem to be as robust as it should be. A better version would be required to achieve that. Speed Grader

PRO is a powerful and easy to use program that gathers detailed performance metrics for programs and

---

web sites. It is easy to use and can collect the data in just a few clicks. It automatically scans a program or web site and then displays detailed reports.

Some examples include average CPU/RAM usage, active processes, open file handles, etc. Speed Grader PRO includes an administrator mode, so you can monitor unlimited number of computers remotely. Adopting a modern and minimalistic interface, the

---

application gives you the possibility to create a new report by following several simple steps in a wizard, or to open an existing one to edit the settings there. Moreover, its usability has been improved to make the process even easier. Customize your reports Firstly, you need to define a report by selecting one or more sections, filters, and gauges. Each section (CPU, RAM, opening handles, etc.) contains various

---

statistics you can sort and manipulate to build your custom reports. The possibilities are endless, and let you monitor different aspects of your system at once. For instance, you can count the number of users who have a particular file open, monitor HTTP requests or logins, or get a list of all the most frequently used files. Even better, you can get an overview of your system's resources and use that data to

---

determine which applications are the most resource intensive. Consequently, you can be very precise in setting your goals for the selected report. For example, you can choose to see a list of the most heavily loaded applications, or to collect information on which files are accessed most frequently. View your results Next, you can save and print your reports to PDF format, copy
