History The first version of AutoCAD was released in December 1982. The idea for AutoCAD was born in a college math class in the 1960s. Dr. John H. Conway, then-head of the Princeton University Computer Science Department and one of the founders of the field of artificial intelligence, was teaching a course on computer graphics. He wanted to demonstrate to his students the then-state-of-the-art graphics workstations of the day, and he chose to display his message on a computer by projecting an image of himself onto a TV screen. The image that he displayed was his head. As it happens, John had a computer science student named Nolan Bushnell who was well-acquainted with the burgeoning field of microcomputers. He realized that this head of his was a really great idea for a computer game, and he and his fellow students started working on what they called "Pong", a 2D version of basketball. The game was relatively simple at the time, with just one person controlling the computer player's paddle and the other controlling the opponent. Once they had a working prototype, they started talking about the possibility of turning it into a more realistic game that involved more than one player. In the meantime, Nolan, John, and their other student Bill Pitts continued to improve the graphics of the game. As the game evolved, Nolan and his fellow students had some very interesting ideas about how they could enhance their game. One of their biggest ideas was to involve an auto-pilot feature that would make the paddle move on its own without any input from the player. Bill Pitts (who had the more technical skills of the two), found a way to implement the auto-pilot in the game. The brainchild of his, John, Nolan, and Bill were able to convince their math teacher to let them use the head image as the basis of their game. Unfortunately, the version of the game they created was only a proof of concept. It was not in any way complete, and it was not quite a game. It was more of an image of what the game might look like. Fortunately, the math teacher's wife saw the project in progress and was impressed by what they were doing. She suggested to John that they expand the project to something that could actually be a game. He agreed with her, and went to Nolan and Bill with the idea that they should bring their idea to

In 1987, Marc Newmark and Neil G. Lewis created Visual LISP and released it to the public as part of AutoCAD in 1989. AutoCAD/Map 3D is a software application developed and distributed by Autodesk that integrates a vector-based CAD system with a geographical information system (GIS) to aid in the preparation, annotation and visualization of geographic information such as maps and satellite images. It can be used to create, edit, and display 2D and 3D vector data, such as AutoCAD drawings, and can load and save objects in a range of file formats including CAD files, GIS vector data and Adobe Illustrator. Its functionality is tightly integrated with other products in the Autodesk suite, including AutoCAD, Map 3D and AutoCAD LT. The functionality of AutoCAD Map 3D has expanded in subsequent versions to include annotation of vector-based CAD data with geographic information. Visual LISP is a platform-independent graphical user interface (GUI) environment for the programming of programs for AutoCAD. It is included with AutoCAD as part of the CreateFromTemplate tool. The Structured Query Language (SQL) has been available since AutoCAD 2.0 and was included in AutoCAD LT 2.0 for MS-Windows. There have been several successors to this including SQL developer for AutoCAD LT. In 2011, Autodesk released Code, a programming language for access to AutoCAD, in their patent-pending APS platform. APS, an alternative to LISP, is a high-level programming language designed for the programming of AutoCAD applications. In 2013, Autodesk released an open source C++ class library, ObjectARX, based on ObjectARX from AutoLISP for AutoCAD. AutoCAD can be used with a variety of CAD file formats including: Autodesk DWG (AutoCAD Drawing, Autodesk file extension.dwg) Autodesk DWF (AutoCAD Drawing, Autodesk file extension.dwf) Autodesk DWG/DWF Converter (AutoCAD Drawing, Autodesk file extension.dlx) Autodesk DXF (AutoCAD Drawing Exchange Format, AutoCAD file extension.dxf) Autodesk FBX (Autodesk 3ds Max, Autodesk file extension.fbx) 5b5f913d15
